Well worth reading.

By jpooch00

Pretty dry reading, but informative and accurate. I'm nearly 70 now and I can tell ya that Toffler hits the nail on the head with this book. I'd been hearing about it for decades - now I know what all the talk was about.

Seeing today's young (and old) zombies riveted to their smart phones while walking out into traffic, into pools and fountains etc. totally oblivious to their surroundings and the rest of the world pretty much drives the message home.

Personally, I'm glad that I was born way back when people thought for themselves and made their own decisions.

The Shocking Future: Are you becoming Obsolete?

By G. Max Gooding

This is a visionary work of literature, that was written in 1970. What is amazing is the realities of today that this author has so accurately captured 40 years ago. The book anticipated what we are facing today, an accelerated rate of changes in technology.

Every couple of months, as you may now be aware, CPU chip speeds in desktop and laptop computers keep increasing. Staying on the cutting edge of technology is almost a full-time job. Next we are faced with an ever-changing cellular phone and MP3 player product range. Now, even the way we read books is changing with things like the ipad and the kindle. Where will this all end? Do we have to keep running just to keep

pace with what's happening? The Internet and the dramatic impact that this has made, may not even have been fully envisioned by this author, but it is here and evolving at its own rate, making the earth a global village.

Mr. Toffler attacks this problem in Six Parts as follows:

- The Death of Permanence
- Transience
- Novelty
- Diversity
- The Limits of Adaptability
- Strategies for Survival

In the end, each of us must formulate our own strategies for this rapidly and ever changing world that we now live in. This author, has given some clinical and effective methods that we can tailor to our own personal situation. We must all continue to adjust or run the risk of being left behind and becoming 'obsolete'.

Interesting - but not sure the shock really ever happened

By David J. Mulholland

Interesting book. I remember my dad reading this book when I was little. I bought it at the recommendation of a colleague. There are some interesting theories in the book, especially looking back to see how some of them played out. I am not sure that the "shock, distress, and overload" that Toffler predicted has come about. His theory that there will be immense changes based on technological and other advancements was not a far reach. However, his prediction that society will ultimately not be able to adapt to, process, or manage all the new capabilities and the changes that they bring may not be wholly accurate. The shock seems to be more on the older generation (for example, not understanding how the younger generation will communicate by text rather than spoke word, even within direct proximity to each other) and the overload also seems to be on the older generation (watching some seniors try to program a GPS can be interesting), but the younger generation seems to be processing and adopting very well. In my generation, one was hard pressed to get to typing 60 words per minute in a typing class, focusing on one paragraph within one single subject - yet the technology of today has taught small children to type just as quickly while managing multiple conversations at one time. There are some good lessons to consider in this book, so it's not a waste of time to read.
